Index of subjects

Airlock system, for specimen exchange, 299

Bacillus megaterium, 359
Bacteria, visualizing the nucleoid, 359
Bombyx mori, antennae as test objects, 187

Cinemicrography, 41, 67
Collagen tissue, 343
Contracting muscle fibres, rapid fixation, 319
Cooling rates, 125
Cryotechniques
  critical point drying, of fungal material, 193
  cryofixation, 125, 187
  cryopreparation, for microanalysis, 149
  cryopreservation, 177, 193, 287
  cryoprotection, 137, 177, 201, 287
  cryosection, 149, 167, 215, 239
  cryoultramicrotomy, 157

Dental impression materials, test for production of replicas, 337
Dilauryllecithin, 125

Echinode m species, studies of intercellular junction, 201
Electron microprobe analysis
  of inorganic fluid, 103
  of electrolytes in epithelial tissues, 239

EM support film, statistical analysis of, 249
Element stability, during electron microprobe analysis, 103
Energy dispersive X-ray analysis, 25, 239
Erysiphe graminis, low temperature SEM of, 193
Escherichia coli, 359

Fixation, 77, 117, 187, 201, 215, 287
  low temperature techniques, 227, 287
  for marine invertebrate ultrastructure, 117
Freezing damage, 187
Freeze-dried specimen, 149, 167, 193, 239
Freeze-etching electron microscopy to study protein morphology, 207
Freeze-fracture, 125, 137, 167, 201, 207, 215, 299, 307, 343
Freeze-substitution, 177, 187
Frost free specimen exchange, 299
Frozen-hydrated specimen, 149, 193, 227
Frozen sections, 137, 167
Fungi, preparation of frozen-hydrated specimens, 193

Glutaraldehyde, 77, 117, 201, 215, 287
Glycerol, 137

Ice formation
  in muscle tissue, 177
  intercellular, 287
Image enchancement, 215
Intercellular junction, study of intramembrane particle movement, 201
Insect antennae, 187
Isothermal freeze-fixation, 177

Kallikrein, identification and functional capabilities, RP1

Macromolecular structure, study of, 3
Microanalysis, 137, 149
Muscle tissue
  cell reaction to fixation, 77
  cryosections, 157, 215
  ice formation in, 177
  muscle contraction, 215, 319
  muscle proteins, 215

Osmolarity of fixative and cell volume change, 77

Panolis flammea, antennae as test objects, 187
Point-projection imaging, 3
Polymeric cryoprotectant, 137
Polyvinylpyrrolidone, 137, 359
Preservation of tissue, a new fixation procedure, 117
Propane jet, 125, 239
Protein morphology, 207

Radiation damage, 227
Rat kidneys, for cryosectioning, 167
Replica production for SEM, 337

Scanning electron microscopy, 193, 239 337
Scanning transmission electron microscopy, 25, 149
Sordaria lumana, low temperature SEM of, 193
Specimen preparation, for analysis of inorganic fluids, 103
Statistical analysis of support films, 249
Stereology
  integral test systems, 51
  quadrats and test systems, 89

Thermal damage to frozen hydrated specimens, 227
Thermocouple, 125
Thin film X-ray spectra, optimization for quantitative analysis, 25
Tissue preparation, 149
Toluene, 157
Transmission electron microscopy
  preparation of Cu–Sn examples, 121
  visualization of high voltage images, 265

Ultra-rapid cooling, 125
Ultrastructure, 117, 137
Unstained section, 149
Urechis caupo, preservation of egg ultrastructure, 117
Uromyces fabae, low temperature SEM of, 193
